

consonant sounds /j/, /z/, /z/

A consonant refers to a speech sound that is produced with an obstruction at the vocal cord or air stream. That is, the air from the lungs is totally or partially obstructed at the vocal cord.

- consonant sound /j/

It is called Palatal, the centre of the tongue makes contact with the hard palate as the sound is produced. It is a voiced sound because there is a vibration at the vocal cord as the sound is produced.

sound /j/ in context of words:

/j/ - young, music, beauty, few, suit, yard, jam, yes, new, year, ewe, huge, furious, huge - - -

- consonant sound /z/

Sound /z/ is fricative; fricatives are produced when there is partial obstruction of air from the vocal cord. In producing the sound, the tip of the tongue and the centre make contact with the alveolar ridge. It is a voiced sound.

sound /z/ in context of words:

/z/ - zip, zinc, fees, bees, whose, those, days, kings, pigs, zonal, zero, zebra, zodiac, zoom, zebra, zeal, zip.
