

STUDENTS' SUMMARY NOTE

Topic: Writing of Reports – Technical/Scientific Reports

Definition of a Report:

A report is an organized written account of an event, experiment, investigation, or situation.

Technical/Scientific Report:

A scientific report is a written account of an experiment or research carried out in the laboratory or field.

It helps to record observations, results, and conclusions in a clear and logical manner.

Features of a Scientific Report:

Title – Name of the experiment or research.

Introduction – Brief background or explanation of the experiment.

Date of Experiment – When the experiment was carried out.

Purpose – Reason or objective of the experiment.

Materials/Equipment Used – List of items needed.

Method/Procedure – Steps followed to carry out the experiment.

Outcome/Result – Observations or findings.

Conclusion – Summary of what was learned or achieved from the experiment.

Important Points to Remember:

Main details: Introduction, Purpose, Outcome/Result, Conclusion

Supporting details: Date, Materials, Procedure

Reports should be written in a logical and organized order.

Clear and precise language makes reports easy to understand.

Tip: Always follow the proper format when writing a scientific report to ensure clarity and completeness.
