

Intonation Pattern: Rising Tune.

Intonation refers to the pattern of changes that take place during speech production. In connected speech, intonation is the variation (the rise and fall) in the pitch of the voice. Intonation enables the listener to interpret an utterance accurately and get the correct information passed across.

There are two basic intonation patterns namely;

Rising Tune

Falling Tune

Intonation patterns are indicated in writing using arrows.

Falling tune 

Rising tune 

FUNCTIONS OF INTONATION.

Intonation has two basic functions: grammatical and attitudinal.

The grammatical function refers to the ability of voice pitch to indicate to a listener the grammatical classification of an utterance. This means that specific intonation patterns are associated with specific sentence types. For example: statements, commands, exclamations are said with a falling tune while questions demanding a yes/ or are rendered with a rising tune.

The attitudinal function conveys to the listener information relating to the speaker's emotional attitude either to the listener or the topic of discussion. For example: a speaker's intonation might reveal surprise, doubt, or warmth.

USES OF THE RISING TUNE

The rising tune is used to make:

1. Simple polite requests.

Examples: Please sit down.

A minute of your time please.

2. Simple greeting

Examples:

Good morning ➞

Hello ➞

3. Questions that require Yes/No answer.

Examples:

Must you go with them? ➞

Do you like apples? ➞

4. Questions without formal question markers such as who, what, when, etc.

Examples:

He is going home? ➞

Kemi is ill? ➞

5. Incomplete statements.

Examples:

As soon as the rains stops, I'll ➞

Since the price of crude oil has fallen, African countries need to ➞

6. Listing items.

Examples:

She bought carrots, green pepper, peas, green beans, cabbage, and spring onions. ➞

7. Express surprise or doubts.

Examples:

You did this yourself? ➞

If you think is necessary.
